Introduction

Welcome to the Liberated Stock Trader Stock Market Profits Blueprint. You are probably asking yourself who is this person. My name is Barry Moore I am a Certified Stock Market Technical Analyst (MSTA) and founder/author of the LiberatedStockTrader.com. I have been trading the markets successfully for over a decade.

The stock market profits blueprint has been hand crafted to enable you to understand all the factors that play on the stock market. It is called a blueprint because a blueprint is in effect an architectural document to show how something is designed.

The Blueprint will show you a powerful way to envisage how the stock market and the stock market investors are impacted by many factors and when you understand how this framework operated, you can use it to your advantage.

But first let us establish some core facts to enable you to really understand why you need a Stock Market Blueprint.

How successful are institutional investors and fund managers at investing?

So let us first talk about the professionals, driving their sports cars, living in their huge mansions, earning obscene amounts of money investing YOUR MONEY and YOUR Pension Fund. Surely with their success and wealth, they must really know what they are doing. WRONG.

The most simplistic measure of any investor is they should be able to beat the market average they are investing in. That means if I am a fund manager actively investing in the S&P 500, if the S&P-500 makes a gain for the year of 5%, I should expect to make more that 5%. In fact, if I am charging my customers 1.5% to invest their money for them and inflation is running at 2%, I will need to make 9% as a minimum so my customers break even.

If I do not, the customers would have been better off investing in a non-managed fund like and Index Tracker or an ETF that simply follows what the index makes.
What should your Stock Market Fund Manager should achieve?

Your fund manager needs to beat the stock market by at least the equivalent of the management fees you are charged for the services.

The Shocking Truth
Standard & Poors measure this performance every year to see how well the average Funds & Fund Managers perform against the market averages. The truth is shocking!

FACT: Most actively managed funds will lose you money compared to the market average

The average percent of equity funds performing worse than the market average:

- Over 1 year = 72%
- Over 3 years = 64%
- Over 5 years = 66%

I think you will agree when I say the odds are very much stacked against you. Even if you find a fund that performs well, they will usually have very high fees for managing your money. This means that the chances of you making any money at all after fees are even more remote.

FACT: Nearly 30% of managed funds are so badly managed they actually go bankrupt.

Here is another fascinating report from Standard & Poors dealing with survivorship. This actually means how many funds actually survive a given time period. If a fund makes huge losses it will usually be closed and the remaining money (if any) is returned to the investors unfortunate enough to have invested.

Only 72% of all Domestic Funds in the US managed to survive the last 5 years!
Why do they not perform better?
The problem is many fold.

Most institutions earn their money from a % of your total investment pot. Not from the money they make for you, although that is a nice to have.

Motivation. Trading other people's money. Some fund managers trade their own account alongside the corporate account. You bet they make better return on their private accounts. Imagine I know I am going to buy 200,000 share of ABC Corp as part of the investment fund I am managing. This will surely move the market price. Before I make this trade I could buy 5,000 shares in ABC from my private account. Then buy with the institutions money the 200,000 shares. The market price moves up. I then sell my private shares for a profit. Easy! They also have issues with the size of the trades they need to make and also the structure of the fund they market. If they market a fund specializing in commercial real estate companies and that sector (as we witnessed in 2009) undergoes a severe recession, then they may have problems hedging their risk and limiting losses. Normally the independent investor should not face these issues.

How successful are passive funds that simply track the market?
Passively managed funds might be a good option as they will track a given index or industry as closely as possible, have lower fees, and are not prone to the misjudgments of active fund managers.

So how well has the stock market performed over the last 10 years.

See this chart at Yahoo Finance:
http://finance.yahoo.com/charts?s=%5eFTSE%3chart4:symbol=%5eftse;range=20000101,20100901;compare=%5egspc+%5en225+%5ehsi+%5ebesn+%5egdaxi+%5edefji+%5eixic;indicator=volume;charttype=line;crosshair=on;ohlcvvalues=0;logscale=on;source=undefined
FACT: Only 3 major stock market indexes have made any money in the last 10 years. So there is the proof. An index tracking fund or ETF would probably have been only worthwhile if you have invested in India, China, Hong Kong or other smaller emerging economies. We can see here that the US NASDAQ, Dow Jones Industrials, UK FTSE, German DAX and Japans Nikkei have not recovered back to the high from the year 2000 bubble.

How successful is the individual investor in the stock market?

An individual investor is someone who invests in the stock market but is not affiliated to Wall Street, investment funds, trading floors or any kind of institution.

FACT: "Overall about 20 percent of the investors studied were able to beat the market consistently".

This means that 80% or investors fails to make any money in the stock market, in fact they will tend to lose money.

This might seem hard to believe, so let me prove it.

The Research: Can Individual Investors Really Beat the Market?

A study conducted in 2005 study by David Hirsheifer - Professor of Finance at Ohio State University's Fischer College of Business & Joshua D. Coval of the Harvard Business School measured the trade success on 115,856 US brokerage accounts from January 1990 through November 1996.

Results

Researchers found that the "top 10 percent of investors they studied earned about 38 percent above the market average per year".

"Overall about 20 percent of the investors studied were able to beat the market consistently".

This means 80% of investors failed to beat the market average.

Even worse "About 10 percent of investors did extremely poorly in their choices and underperformed the market about 23 percent a year annualized. The losses of these investors are far greater than the losses of the average individual investor"

Other research backs this up
"Barber and Odean (2000) note, the top-performing quartile of the individual accounts in their dataset outperform the market on average by 0.5 percent per month".
That means 25% of traders beat the market by 6% per year.

**How was this possible?**

The study suggests that "While few would expect individual traders to be, on average, better informed than mutual fund managers, there are compelling reasons to believe that individual traders are better positioned to exploit a given informational advantage.

*First, individual traders almost always trade smaller positions than professional traders. As a result, the pressure that their trades impart on prices is likely to be much less.*

*This makes them far better positioned to trade using strategies that exploit smaller or shorter-term deviations from fundamental values.*

*Second, individual traders are less constrained than mutual funds to hold a diversified portfolio or to track the market or a given benchmark.*

**Resource:** [http://researchnews.osu.edu/archive/goodinvs.htm](http://researchnews.osu.edu/archive/goodinvs.htm)

So how can I be part of the TOP 20% of smart investors?

**Winners & Losers in the Stock Market**

- 20% Winners
  - Over-trading
  - No Risk Management
  - Lack of real education
  - No money management skills
  - Penny Stocks Newsletters
  - Insider Tips
  - Get rich quick mentality

- 80% Losers
  - Well educated smart investors
  - No emotional control

The key is to be part of the top 20% of really smart, educated investors.
That means some hard work.

**How can you educate yourself to be a top 20% performer?**

Here is the crunch. Those elusive stock market profits are not easy to find as 80% of investors will attest to. So we need to go and educate ourselves.

But wait there is a little problem with that also.

Most stock market education fails to achieve what it is supposed to. Most courses fall into the Technical Analysis Trap. They teach only technical analysis. This is where the Stock Market Profits Blueprint comes in. It will provide you the entire roadmap of knowledge you need to have to be a top performer.
The Stock Market Profits Blueprint

The Stock Market Blueprint will enable you to become a successful trader by providing you a roadmap to understanding how the stock market really works.

Unlike any other structure for learning it is based on 4 pillars.

The 4 Pillars to Profit

![Pillars](image)

Each pillar represents a critical foundation of knowledge. Have a deep understanding of these pillars will enable you to excel in the Stock market. Having this knowledge will mean you no longer seek stock tips, yearn for advice, or be insecure in your trades. You will be a master.

Soon we will look inside the pillars to find the critical knowledge.

But first you need to know there is a war between the stock market professionals.

Read on...
The War: The Fundamentalists versus the Technicians

Perhaps the word war is a little strong, but it is a war of words.

<table>
<thead>
<tr>
<th>Fundamental Analysis</th>
<th>Technical Analysis</th>
</tr>
</thead>
<tbody>
<tr>
<td>Studies the why !</td>
<td>Studies the what !</td>
</tr>
<tr>
<td>Studies the cause !</td>
<td>Studies the effect !</td>

<tr>
<td>Focus on value</td>
<td>Focus on market action</td>
</tr>
<tr>
<td>Focus on economic data</td>
<td>Focus on price</td>
</tr>
<tr>
<td>Focus on fundamentals</td>
<td>Focus on trends</td>
</tr>
</tbody>
</table>

Forms hypotheses based on fundamental data as to what has value and therefore forecasts using news and economics or simply the value of a business.

Forms hypothesis bases on what actually happens in the market place, only forms an opinion about the market based on what the market or stock tells them. Supply and demand

What does this really mean: Fundamental Analysis and Technical Analysis? Imagine if you will the job of a Meteorologist. One of the core tasks of the meteorologist is to predict the weather. The approach to weather prediction is in many ways like traders and investors approach the market.

The fundamental approach to weather forecasting means you need to understand the fundamentals. Why rain clouds form? What happens when cold air meets warmer air? How thunder and lightning occurs? How hail or snow forms? Why winds move in particular directions in general? What types of raincloud produce what types of weather?

However, understanding all of the fundamentals does not enable you to predict the weather on a particular day for a particular region. This is similar to the market.

Understanding how the Federal Reserve works does not enable you to predict the stock price of ABC Inc, nor does knowing that ABC has increased its sales, guarantee in any way a stock price increase.

To predict the weather the weather, forecasters also use a technical approach. They measure the direction of the wind, the temperature of the air, the humidity, levels of rainfall and cloud density. Using this information the weather forecaster can combine what is actually happening with their understanding of the fundamentals of weather to predict weather in a particular area. Of course they are never 100% correct in their predictions as the weather, like the Stock Market, has so many chaotic influences that it is impossible to be correct all of the time. However, if you know that it is currently raining in New York City and the wind is blowing from the north at a certain speed, you can predict with some accuracy when it will be raining in New Jersey.

Using Technical analysis on the stock market is just the same. If you know that the market trend is up (the wind direction) and you can see the price movement of a stock is accelerating (wind speed) and you
know how much power the rally is carrying using Volume and Momentum, and you can see where the next resistance area will be (New Jersey) then you can assess the probability of a stock price increase. You can then use this probability to assess your risk reward of being correct (forecast the weather), and then place the trade (announce the weather forecast on TV)

Understanding the conditions that breed a healthy stock market and healthy company are absolutely fundamentally important.

However, if you buy any stock at the wrong time when supply and demand is not in your favor you stand a strong chance of losing money. This is why the technical approach is so important.

The Fundamental Analysis Pillar

The Fundamental investors or Value Investors like Warren Buffet or Benjamin Graham seek out investments where the risk of the trade is extremely low, due to the large difference between the value of the stock and the underlying fundamentals.

There are also many other critical fundamental factors that play on the stock market.

The effect of Monetary & Fiscal Policy in many ways determines the overall direction of the stock market. They also directly impact employment and demand.

Learning about the fundamental impact of governmental economic policy and money supply on the market is very important to your long term success.

From this information we can assess the long term market direction. This will enable us in turn to adapt our strategy to the market.

Recommended Reading: The Intelligent Investor - Benjamin Graham
Technical Theory is the study of fundamentals, but indirectly. A stock with great fundamentals can increase in value, but when? Technical analysis is the study of the effect of good fundamentals not the cause. So, when it is time for a stock to start increasing the technical analyst will see this in the charts. Whether the reason is good news, fundamentals, a positive sentiment in the market or improving business climate, all will be seen through the study of the price in the format of charts.

Contrary to popular belief, having a solid grasp of technical analysis enables you to combine it perfectly with your fundamental knowledge of markets and companies.

Stock chart analysis enables you to see the supply and demand balance especially when used professionally with some of the excellent Price & Price Volume indicators available.

You can then set price target based on chart patterns and use these price targets to establish your risk reward ratios.

This in turn will enable you to plan exactly your Entry & Exit strategies for your stock. Technical analysis also allows you to optimize your timing and stop losses to minimize your risk and maximize your reward.
Fundamental & Technical Analysis Combined

**Fundamental Analysis**

- The Business Climate
  - Market Analysis
    - Fundamental Market Direction
      - Positive Trend: Go Long
        - Screen For Stocks
          - Find Great Companies
          - Find Terrible Companies
        - Sentiment Indicators
      - Negative Trend: Go Short

**Technical Analysis**

- Monetary & Fiscal Policy
- Employment & Demand
- Business & Demand Cycles
  - Timing & Stop Losses
  - Entry / Exit Strategy
  - Establish Risk Reward
  - Set Price Targets

**Analyze Stock Charts**

- Price / Price Trend
- Volume
- Indicators: Supply / Demand
**Portfolio Management Pillar**

Equally important is the Portfolio Management pillar.

Portfolio Management is the ability to manage your money optimally, understanding how to use compounding and solid growth to maximize your portfolios worth.

Setting solid expectations and real targets to achieve are absolutely key.

Diversification or concentration? How many stocks should you buy? How long should you hold?

How much should you reserve in cash? How much should you invest in any one stock?

How can you optimally execute the trade? What risk reward factors to use. How do you secure against significant losses? What size of win you need and how many?

**The Psychology Pillar**

What most people neglect is the psychological aspect of trading. This is why I do not believe using Stock Market simulation games provides a realistic indication of future performance. When real money is on the line, it is a completely difference sport.

Mastering your mind set is important and can greatly assist you while you are "in trade"

Learn to manage your emotions in a practical way. There are many practical and personal lessons we can get from other traders.

Try to setup and review your "in trade rules" to be as emotion free as possible

Selecting the right education for the Stock Market Profits Blueprint

The Technical Analysis Trap
Most stock market education fails to achieve what it is supposed to. Most courses fall into the Technical Analysis Trap. They teach only technical analysis.

While technical analysis is an excellent tool, it is not the only tool.

Both students and education companies fall into the trap of over-reliance on technical analysis.

• You need an education that provides every element of the Stock Market Profits Blueprint.
• An education that completes all 4 pillars of the Stock Market Profits Blueprint
• An education to help propel you into the top 20% of stock market winners

There is only one education that fits this bill.

Introducing the Liberated Stock Trader Pro Training:

• Understand what REALLY moves the stock market
• Combine the power of Fundamental Analysis & Technical Analysis
• Utilize the power of Stock Charts, Price Patterns, Volume and Indicators
• Learn how to avoid the sheep mentality – using Sentiment Indicators and News Filtering
• Take control of your own mind with Trading Psychology
• Learn how to do Market Analysis like a professional – to help predict future stock market moves.

See the details http://www.liberatedstocktrader.com/technical-analysis-course-stock-market-training/
Recommended: Liberated Stock Trader PRO Education Package

http://www.liberatedstocktrader.com/technical-analysis-course-stock-market-training/

Instantly YOU will learn a crucial strategic approach to the market.

Understand the Boom and Bust Cycle.

Take advantage of Market Cycles to give yourself an absolutely unique understanding of the market.

What made Warren Buffet rich? A Mastery of Business Fundamentals, YOU will learn the foundations of fantastic companies, and how to find great stocks for the future.

Chart Reading is not Voodoo it is science.

Be the Shepherd not the Sheep. You will know how to use Sentiment Indicators and understand how news affects the markets.

Don't Panic – Master your mind with a completely unique approach to “Trading Psychology”

Trading strategy will unleash the power of YOUR originality in your approach to the markets.

Money Management is key to maximum profits.

Finally I provide a structured method to enable you to combine all your new found knowledge into a unified strategy ready to unleash on the market.

A world first. An entire stock market course on your mobile phone.

16 hours of high quality video lessons

Including the Liberated Stock Trader Book available in Adobe pdf
